

# Seven Commandments of AutoLayout

- I. Tweak the properties of the StackView
- II. Use another StackView
- III. Tweak the compression resistance or the hugging priority
- IV. Add constraints to the StackView
- V. Add constraints to the views
- VI. To connect views within different StackViews, use V.
- VII. If everything else fails, use a filler view

# Guiding Principles of AutoLayout

- ◆ StackViews first, constraints later
- ◆ Start small, or not at all
- ◆ Work from the inside out
- ◆ Trust the simulator only
